

DMJ.ONE TRUST SERVICES

INDEPENDENT EDUCATIONAL INITIATIVE · DOCUMENT TRUST SERVICES

Under the Bharatiya Sakshya Adhiniyam, 2023 (Act 47 of 2023), Section 63 — admissibility of electronic records

Certificate of Authenticity

SECTION 63 · ELECTRONIC RECORD

This certificate is issued under Section 63 of the Bharatiya Sakshya Adhiniyam, 2023, in respect of the electronic record described below. It identifies the record, states the manner in which it was produced and the particulars of the device(s) involved, and records the cryptographic hash by which the integrity of the record may be independently verified.

PART 1 · IDENTIFICATION OF THE ELECTRONIC RECORD

Credential ID	DMJ-IC-20260604-01
Nature of record	Internship Certificate
Recipient	Rijul Chaudhary
Title borne	Certificate of INTERNSHIP
Date of issue	04 June 2026
Current status	Valid
Stored as	A digitally-signed PDF document (Portable Document Format, ISO 32000) retained in the issuer's records.

PART 2 · INTEGRITY HASH OF THE ELECTRONIC RECORD

Hash algorithm	SHA-256
Hash value (hex)	35c7744df7fc0ba8404271f4b9638de221694cd6ccde826eb2b45e6c0f35393f

The hash above is computed over the complete, digitally-signed PDF as retained by the issuer. Any alteration of a single bit of that document yields a different hash, by which tampering is detected. The same value is published in the issuer's append-only transparency log.

PART 3 · MANNER OF PRODUCTION & DEVICE PARTICULARS

Produced by	dmj.one Trust Services (Google Cloud Run, asia-east1)
Method of production	The certificate content was rendered to a PDF by a headless Chromium browser; the PDF was then signed in-place with an embedded PAdES (PKCS#7) signature, and a detached post-quantum ML-DSA-65 (NIST FIPS 204) signature was computed over the SHA-256 hash of the signed PDF and retained in the issuer records and the public append-only transparency log.

Device particulars	Google Cloud Run managed compute (Linux x86-64 container), region asia-east1; system Chromium (headless) for rendering; Node.js runtime performing PAdES signing (node-forge / @signpdf) and ML-DSA-65 signing (@noble/post-quantum); signing keys held encrypted at rest (AES-256-GCM) in Google Secret Manager and loaded only by the issuer service at issue-time.
Certificate generated at	2026-06-05T07:21:52.443Z

PART A · STATEMENT OF THE PERSON OPERATING THE COMPUTER (PRE-FILLED)

I, the person lawfully in charge of the computer output and the activities relating to the said electronic record on behalf of dmj.one Trust Services, do hereby state that:

1. The electronic record identified in Part 1 was produced by the computer system described in Part 3 in the ordinary course of the activities of dmj.one.
2. Throughout the material period the said computer system was operating properly, and the contents of the electronic record were not affected by any improper operation of the computer.
3. The information contained in the electronic record reproduces, and is derived from, information supplied to the computer system in the ordinary course of the said activities.
4. The integrity hash stated in Part 2 was computed over the said electronic record by the means described in Part 3, and correctly identifies it.

ISSUER TRUST IDENTITY

dmj.one Trust Services — Document Signing (X.509 subject CN=dmj.one Trust Services, OU=Document Signing, C=IN). The signed PDF carries an embedded PAdES (PKCS#7) signature object bearing this subject, and a detached post-quantum ML-DSA-65 (NIST FIPS 204) signature covering the document hash, retained in the issuer’s records and transparency log.

HONEST DISCLOSURE · NATURE & LIMITS OF THIS ATTESTATION

dmj.one is an independent educational initiative; it is **not** a Government body, a recognised University, or a licensed Certifying Authority. The cryptographic signatures on the record are **self-signed** attestations by dmj.one: they prove that this credential was issued by dmj.one and has not been altered. They are **not** a digital signature backed by a licensed Certifying Authority under the Information Technology Act, 2000, and therefore do not carry the statutory presumption attaching to such signatures. Tamper-evidence is provided by the post-quantum ML-DSA-65 signature together with a public, append-only transparency log; authenticity may be verified independently and without any password at the issuer’s verification service.

For dmj.one Trust Services Divya Mohan · Founder · dmj.one Part A · operator of the computer system	Part B · to be completed on presentation Signature of the person tendering the record in evidence, with name, designation, date and place.
